APPLICATION FOR POSITION

Front End developer
Workplace/Company

Kosovo,Prishtina

COMAPNY PROJECTS

DSOA Chatbot - Developed a multilingual chatbot interface for a website using React, SCSS, and Redux for state management. Connected the UI to a .NET API and implemented i18n for seamless language support, enhancing user engagement and communication with the bot.

Pygmalion Be (React Js App) - The Pygmalion project was an e-commerce platform with a webshop and ERP for a home decor company, built using React.js, React Query, React Router, Zustand, and Material UI. My role involved developing the UI and integrating it with the API. Key webshop features included user authentication, profiles, product listings, a blog, and Stripe payments. The ERP enabled product, blog, and user management. This project provided both a seamless shopping experience for customers and efficient tools for business operations.

Morel Opticien (Next Js App) - As a Frontend Developer, I worked on Morel, a dual-purpose platform comprising an e-commerce webshop and an ERP dashboard for an optical company in Belgium. Using Next.js, I developed the UI and handled API integrations, creating a responsive, user-friendly webshop with features like user authentication, profile management, product catalog, blog posts, and Stripe payment functionality. Additionally, I built a robust ERP dashboard for managing products, blog content, prescriptions, users, POS, and more. Leveraging React Query for optimized data fetching and Zustand for efficient state management, I delivered a high-performing, cohesive user experience across both the webshop and ERP components. Technologies included Tailwind CSS for styling and ShadCN for UI components, ensuring a polished and scalable front-end solution.

Blackstone Website - redesinging of company website modules and added new features. Technologies that used: Html/Css, Javascript, Bootstrap.

CNW Gmbh - It Services Company Website developed and designed with Wordpress
